END OF SEARCH HISTORY

AB To examine more fully the enzymic capabilities of thermophilic actinomycetes, API ZYM strips were used to assay 19 different enzymes. Culture supernatant fractions obtained from 13 isolates of *Thermoactinomyces candidus*, 10 isolates *T. vulgaris*, 2 isolates of *T. sacchari*, 7 isolates of *Micropolyspora faeni* 4 isolates of *Saccharomonospora viridis*, and 4 isolates of *Thermomonospora fusca* were assayed. Whole cells from selected isolates were also assayed. Alk. and acid phosphatase, C4 esterase, and C8 esterase-lipase activities were demonstrated for both whole cells and supernatant of *T. candidus*. *M. faeni* Whole cells and supernatant contained alk. and acid phosphatase, phosphoamidase, C4 and C8 esterase-lipase, and leucine and cystine aminopeptidase activities. Whole cells of *T. vulgaris* displayed C4 esterase, leucine aminopeptidase, chymotrypsin, and α -glucosidase activities, whereas supernatant contained only phosphoamidase and α -glucosidase activity. Culture supernatants fractions of *T. sacchari* showed alk. phosphatase and C4 and C8 esterase-lipase activities. *T. fusca* Supernatant fractions contained C4 and C8 esterase-lipase activities, leucine aminopeptidase, β -galactosidase, and α -glucosidase activities. *S. viridis* Had alk. phosphatase, C4 and C8 esterase-lipase, C14 lipase, leucine aminopeptidase, α -glucosidase, and N-acetyl- β -glucosaminidase activities. The differences in enzymic profiles for these actinomycetes allowed clear differentiation among genera and species.

AB A pharmaceutical compn. is provided contg. ³¹ antibiotic of the bleomycin family and ³¹ proteins for inactivating the bleomycin(s) to reduce the side effects caused by the bleomycin(s) in some organs. The bleomycin inactivating proteins include e.g. bleomycin hydrolases, bleomycin transferases, and bleomycin-binding proteins; they may be administered before, during, or after administration of the bleomycin(s). Recombinant prodn. of bleomycin-binding protein Sh, using plasmid pUT751 and Tolypocladium geodes cells, is described, as is purifn. of the protein.. In animals treated with phleomycin D1 (as a copper complex) and also treated with protein Sh via aerosol, there was less incidence of pulmonary fibrosis than in animals treated with the phleomycin compn. alone.
